# WE DE SI GN

## New Arrivals

Our new proposals for SS 25 are designed to complement our main collection, as we increasingly focus on timeless simplicity and clean lines that ensure lasting style and durability.

Ensuring longevity is our most sustainable approach, which also prevents seasonal devaluation.

# Sea

This model was designed to be quick to wear and perfect for those who can't stand flip-flops. It features a super chic and absolutely unisex design, embracing the foot and providing stability.

Inspired by the need for comfortable footwear that allows you to walk both in the city and among the rocks without any problems, we created this trekking-style sandal made of plastic. It is water-resistant and incredibly fun because you can create amazing color combinations between the sole and the upper.

# relax

Tired of the usual slide sandal, we continued the simple, sleek, and easy-to-wear design of our main collection. Featuring a tire-patterned sole for grip and a wraparound upper for stability, this sandal is both quick and easy to put on.

## Our Main Collection

Our main collection has been entirely designed by us, taking inspiration from the world around us and the diverse cultures that inhabit it.

Our primary goal has been to meet the needs for which our sandals might be purchased, guided by feedback from people around us over the years.

Since we introduced our first sandal (the Cross!), in 2005, we have continuously developed new items each year that complement the rest of the collection, creating a distinct and cohesive mood. This is achieved through our unique and recognizable sole design, which mimics a tire tread, and the simplicity of our chosen lines.

Over the years, we have naturally evolved towards creating items with their own style, unaffected by the transient dictates of fashion, ensuring they last over time. This choice, combined with the durability of our products, is not only the most environmentally sustainable solution but also economically advantageous. Having original items that do not go out of style means there is no fear of competition, and retailers can choose never to put them on sale, as they are part of an evergreen collection.

Each item you see is already developed in all sizes, can be produced in various materials and colors, and can be customized with your logo, or with the Henry&Henry® brand.

# Green Collection

# 3

Our company is committed to **ESG principles**. We utilize sustainable energy sources, and even produce some ourselves. In 2019, we were awarded the Green Gold Plaque for the **#Futurogreen2020** project, thanks to the renovation of our headquarters. Our entire production is based in **Italy**, and for materials and molds we don't produce in-house, we source from Italian companies that ensure fair wages and no exploitation or discrimination. By choosing local suppliers, including subcontractors for specific processes, we have reduced the distance between us and our partners, thereby lowering CO2 emissions. After years of studies and trials, in **2021** we began offering the **first green material alternatives** to our customers, and we haven't stopped since. We've developed a **technology** that allows us **to recover and reuse our production waste**. Moreover, we've established a **network to reclaim scrap materials** from other local producers in different industries. This led to the creation of our **RE-cycled line**, of which we couldn't be prouder.

By choosing to work with us, you will always have **high-quality products that are environmentally friendly and made from sustainable materials**. Our commitment to ESG principles is reflected in every stage of our production process, ensuring **transparency, innovation, and social responsibility**.

# Our main collection, in **orgavinyl**

**ORGAVINYL®** is a kind of plastic made with a **vegetable oil** obtained from the residue of pulpwood extraction from sustainably managed conifer forests or from chemical recycling of plastic and tire waste.

We have updated our main collection of best sellers, typically made from PVC, with an equally high-performing material composed of bio-attributed certified resins and plasticizers. This new material maintains the same lightness and matte finish!

You can now **choose to produce any item from our main collection using this innovative and sustainable material.**

# Our main RE-collection

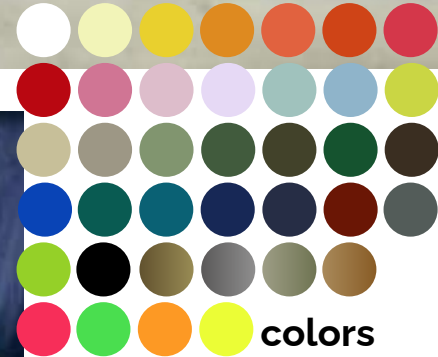

We have developed a technology that allows us to **recycle** not only **our own production scraps**, achieving a completely **zero-waste** production, but we have also created a small **network** to collect **waste from nearby factories** in other industries.

Now, **you can choose selected item from our main collection in recycled material**, characterized by this "speckled" pattern.

For durability reasons, only the sole will be produced with this mixed material, while the upper part will be made from regenerated material without the reclaimed pieces embedded in it.

# About us

Randi Creazioni was born in February 2005, when Enrico Randi, after a long experience first as agent and then as sales manager in leading companies of the footwear industry, decided to found his own company by capitalizing on the skills acquired over years. In 2014 his daughter Carolina joined the company, bringing innovation revitalizing existing models and introducing new designs, emphasizing customization techniques. Committed to sustainability, our vision places emphasis on eco-conscious practices, ensuring that each pair of shoes reflects a perfect blend of tradition and forward-thinking.

We created Henry & Henry® a worldwide registered trademark, but we often work with private labels and develop special projects for our clients, guiding them from the initial idea to the final creation.
